

Adjustable Louvre Awning

Maximum Heat Deflection

Aluminium is one of the most versatile and durable materials for building and construction, making it ideal for awnings. Aluminium offers a high resistance to corrosion and weathering and requires minimal maintenance.

CSIRO Information Service Sheet No. 10-38 June 1978.

aluminium awnings

Fixed Hood Awnings

These awnings consist of tightly interlocking panels and concealed joins and can be made any width. They can also be mitrecut and fitted to turn corners, with the option of posts or arms for support, depending on the projection.

The **Horizontal Stripe** style is for the budget buyer and consists of horizontal panels.

All Weather Awning

The **Vertical Stripe** style has an attractive narrow/wide vertical panel construction with a scalloped edge.

Louvre Awnings

Louvre awnings offer excellent protection from the elements, while allowing a breeze to enter your home when desired.

The **Fixed Louvre** awnings are available in an open or closed design. The angle of the panels you choose will be determined by the direction of the sun.

The **Adjustable Louvre** awnings have a handle to open or close the panels, allowing airflow and light control when open or partly open and maximum protection and privacy when fully closed.
