

SUNVAS v. ACRYLIC

Sunvas is a brand new polyester awning fabric that combines the **look and feel** of traditional acrylic fabrics with the **cutting-edge technical properties** of sunsilk.

- 25% thinner than acrylic fabric resulting in a better rolling performance and reduction in puckering along the bonded seams.
- Fewer issues with sagging, creasing and stretching due to the “memory like” characteristics of the fabric.
- Improved fabric tensile strength i.e. a stronger fabric.
- Nano coated resulting in improved dirt and water repellence.
- 100% UV protection resulting in a longer lasting fabric.
- An unlimited colour range with vibrancy and luminescence well above acrylic fabrics.
- Developed through extensive R&D over a period of almost 3 years, *sunvas* represents the cutting edge of high tech external polyester fabrics.

Fabrics manufactured by the Schmitz-Werke contain no harmful solvents and require no additional labeling!
